

Helping individuals, industry and communities transform the world— one carbon footprint at a time.

**POWERSOL ENERGY**

## A Different Approach

With global warming, environmental impact and energy conservation at the forefront of everyone's mind, PowerSol Energy has developed a simple way for residential, commercial, industrial and municipal property owners to incorporate green technologies that are affordable, easy to implement and sustainable.

Convenient,  
Affordable and  
Sustainable  
Green Solutions

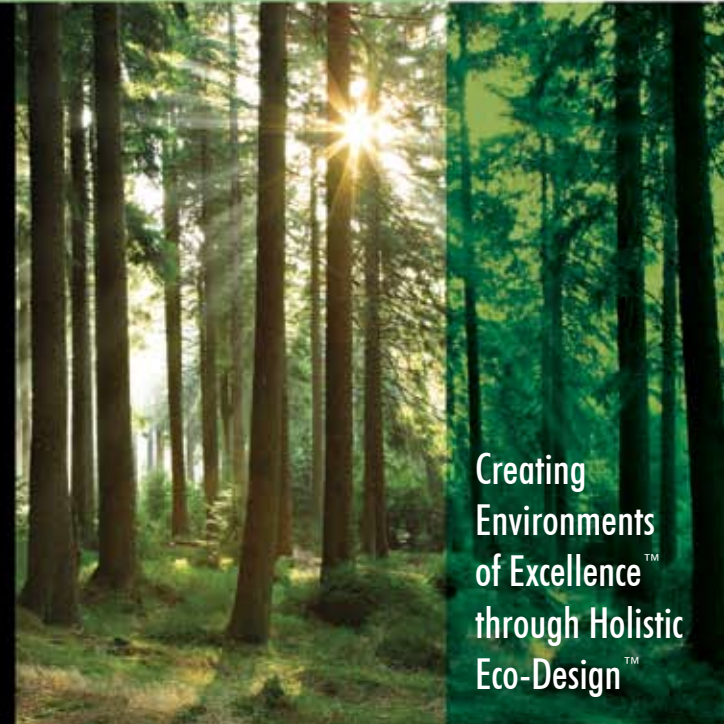

## The Eco-Advantage System™

PowerSol Energy's approach is different—instead of focusing on one or two green technologies such as solar power or conservation devices like most environmental technology integrators, PowerSol Energy offers clients its Eco-Advantage System™. This innovative system combines numerous technologies that work in harmony to extend the benefits of each product beyond what each could provide as a stand-alone item.

**POWERSOL ENERGY**

*Passionately Integrating Environmental Wellness and Green Technologies into Everyday Living*

Creating  
Environments  
of Excellence™  
through Holistic  
Eco-Design™

“ Together, we shall save this planet or together we shall perish in its flames - save it we can, and save it we must and then shall we earn the eternal thanks of mankind and the eternal blessing of God. ”

- John F. Kennedy, 1961

16155 Sierra Lakes Parkway  
Suite 160310  
Fontana, CA 92336  
909.581.8011

change your environment... transform the world

## Holistic Eco-Design™

PowerSol Energy's Eco-Advantage System™ draws inspiration from nature's efficient and renewing processes. Our eco-designs incorporate a harmonious blend of technologies to create Green Biofields™ —environments that are energy generating, save money, conserve resources and positively affect personal health.

“If the bee disappeared off the surface of the globe then man would only have four years of life left. No more bees, no more pollination, no more plants, no more animals, no more man.”

- Albert Einstein

We consider the quality of the environment equally important as energy efficiency and savings.

## Green Biofields™

Technologies may not be designed by a manufacturer with the thought of working in tandem with other products. However, PowerSol Energy knows that by integrating the right mix of technologies, clients can achieve substantially better results than a single technology solution for the same cost or less. We create sustainable Green Biofields™ by implementing a combination of:

- Solar electricity
- Hydrogen fuel cell technology
- Water conservation
- Ultra Efficient Lighting™
- Indoor air quality
- Back-up power systems and more

THE FULLEST POTENTIAL

savings  
conservation  
protection  
wellness

As Certified Green Building Professionals, PowerSol Energy will consult with you to create a design that is eco-efficient and bio-regenerative. This results in an environment that is healthy, comfortable, productive and affordable.

Every Eco-Advantage System™ implementation begins with an assessment of the property, followed by the creation of a plan and budget that demonstrates how various technology combinations provide the best possible return on investment, enhance the environment and reduce the “carbon footprint.”

THE RIGHT SOLUTION

residential  
industrial  
commercial  
municipal

By working with a Green Building Performance Group™ like PowerSol Energy and its strategic partners, individuals, companies and communities can save time and money when making the commitment to implement “green” initiatives and solutions.

Our excellence in customer satisfaction, sustainable eco-design, strategic partnerships and project management enables us to be at the forefront of emerging technologies to deliver the highest value to our clients.
